MERWYN PRINCE LOBO

E section

The figure is a scatter plot titled "Linear Decision Boundary". It displays two classes of data points: Class 0 (blue circles) and Class 1 (red circles). The x-axis is labeled "Feature 1" and ranges from -3 to 3. The y-axis is labeled "Feature 2" and ranges from -3 to 3. A solid red line represents the linear decision boundary, which separates the two classes. The region above and to the left of this line is shaded blue, representing the predicted area for Class 0. The region below and to the right of the line is shaded red, representing the predicted area for Class 1. Most data points are correctly classified, but there is a significant overlap between the two classes in the central region, particularly around the decision boundary.
